I have three types of documents. File1, File2, File3. These are all different types but same in following ways. One has the following content: Some text followed by the "words" and "words" and "words", lines and lines and lines.... And another one has the following content: There is a line here that followed by the "words" and "words" and "words", lines and lines and lines. And other one has the following content: One line that followed by the "words" and "words" and "words", lines and lines and lines. All these three types of documents are excel files of different version. I have to compare all these three types of documents. How can i make it one thing of "paragraphs" Example: File1 contains following paragraph Some text followed by the "words" and "words" and "words", lines and lines and lines. And File2 contains following paragraph There is a line here that followed by the "words" and "words" and "words", lines and lines and lines. And File3 contains following paragraph One line that followed by the "words" and "words" and "words", lines and lines and lines. I have to compare these files. I am using python2.7 A: You can use pandas. First, you can read them with pandas. import pandas as pd df_1 = pd.read_excel(r'C:/Users/user/Desktop/filename-1.xlsx') df_2 = pd.read_excel(r'C:/Users/user/Desktop/filename
