is a technology that allows you to run two or more operating systems on one computer, usually on top of one or more real operating systems. In contrast to virtualization, disk encryption (or disk decryption) is a software solution that provides confidentiality for data that is stored on the hard drive. Folder Lock Video Guide 09 Folder Lock Video Guide Developer: Malwarebytes License: Freeware File Size: 234,7 M Released: 2018-07-02 System Requirements: Windows XP SP2 08 Folder Lock Video Guide Folder Lock is definitely one of the most effective security tools on the market. Easy to use and capable of protecting a huge number of folders, it comes with many options for encryption and can be used for both physical and virtual devices. Not only that, but you can actually adjust the security level depending on what you do or where you

store your files. Most of the basic functions can be accessed using a single hotkey, which makes it very handy. Folder Lock needs to be configured. And that, due to the fact that its options are spread across several windows, makes it harder to understand at first. Still, once you get the hang of the application and select the right security level, you should be able to complete your tasks without too much hassle. Overview Folder Lock is a well-known piece of software that has been available for quite some time already. It has been produced by the reputable software maker Malwarebytes, which can hardly be bad. According to Malwarebytes, it is able to keep

your personal data safe. But you have to be extra careful when using this tool. Design Folder Lock comes with a rather simple and clear design. The main window can be used to quickly access and lock items of interest, while a separate "advanced options" panel can be used for managing different options. Controls The main window features a lot of hotkeys that can be used to perform common tasks. For instance, if you need to lock an item, you can simply use the "L" key to access the "Lock Files" feature. If you wish to access the "Advanced options", you can use the "Esc" key, which also brings you to a desktop that contains a guide that explains all the

features you can use. Installation Folder Lock is a freeware that can be downloaded from the official website. During the setup process, you will need to download a file called "setlock.exe". Use Once the setup is complete, you can start using the program. All the functions can be accessed using the main window. You

cool features, but one feature, which, unfortunately, does not work right, is the "safe" zone. "Safe" folder locks lock the file (or folder) as long as the main Window is not in the safe zone. So if I lock my desktop, my files (and sub-folders) are locked on my desktop. But if I lock my documents folder, my files are locked in my documents folder. Another thing which is annoying is that the lock only locks files, but does not show up on the Explorer (Windows 8) like a regular user would. When they try to un-lock the folder, it is not possible, as the lock is not shown and so it is not possible to unlock. I don't know if they fixed this problem in an update or if the

program is not really meant to be used this way (in the "Safe" Zone). So if you find these annoying, you can use it for your Windows, but I would not use it in the "Safe" Zone. And after you run the software and get it in the "Safe" Zone, don't forget to delete the "Safe" Zone. Maybe they thought it was weird to delete the zone by mistake. Folder Lock: - Well organized interface - Can lock files and folders - Can show the safe zone as a lock - Can encrypt files - Can create and manage virtual wallets - Can access the safe zone from within the program - Can logoff the computer - Can access the Internet from within the program As easy as 1, 2, 3! Review by aarong90 Folder Lock is a nice way to keep all of your files and folders organized. This small application is a great tool to prevent others from accessing your information. A Great App For Everything Folder Lock Review by ACM I'm not the type to say anything bad about anything, but this app needs to be removed from the Windows store. You can do a lot of things within the program and have it still run fine, but you cannot install programs, download files, run macros, etc. within the program. That's not an issue for most of us who use computers, but for schools with very strict security policies, it's a big problem because you can't run any

other programs in the program. Works as described Folder Lock Review by krukk85 Works as expected. Keeps files out of reach for normal users. Very handy for secured folders Folder Lock Review by badlpilot This program is for those people who are paranoid about their files and want to keep them away from other people and organizations.
